

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

$$= 0.14 + \left(\frac{-31}{30}\right)(0.04)$$

$$= 0.14 - 0.04133$$

$$= 0.09867$$

$$= 0.099 \text{ ppm}$$

Therefore, mean concentration of SO<sub>2</sub> in the air is 0.099 ppm.

Question 8:  
A class teacher has the following absentee record of 40 students of a class for the whole term. Find the mean number of days a student was absent.

Number of days	0 – 6	6 – 10	10 – 14	14 – 20	20 – 28	28 – 38	38 – 40
Number of students	11	10	7	4	4	3	1

Answer:  
To find the class mark of each interval, the following relation is used.  
$$x_c = \frac{\text{Upper class limit} + \text{Lower class limit}}{2}$$

Taking 17 as assumed mean ( $a$ ),  $d_i$  and  $f_i d_i$  are calculated as follows.

Number of days	Number of students $f_i$	$x_i$	$d_i = x_i - 17$	$f_i d_i$
0 – 6	11	3	-14	-154
6 – 10	10	8	-9	-90
10 – 14	7	12	-5	-35
